

WEEKLY STREET MAINTENANCE UPDATE FOR JULY 21, 2017

Sidewalk and curb pouring continues on Pine Street, Market Street, and North 10th Street. The contractor prioritized the intersection of North 8th street where Market Street and Pine Street intersect because contractors do not want to interfere with the City's Fire Department. They planned to have the intersection sidewalks done by this Friday, but Thursday morning's storm altered plans.

The contractor continues to head west on Pine Street and Market forming curbs and sidewalks. To maintain scheduled goals the contractor will work this Saturday, pending weather. Work on North 10th will conclude by Tuesday. Milling and overlay work begins once all concrete work is completed.

Thursday morning's heavy rains halted progress on South 5th Street. The rain soaked base prevented the contractor from continuing to replace damaged bricks and base leveling. Recent discussions favor work moving to South 2nd Street next once work is completed on South 5th Street. In addition to the planned brickwork, plans also include replacing sections of damaged curb. The additional work will create added traffic controls and parking restrictions. The City will continue to update residents as details become available.

Sidewalk removal along the west side of IL 23 concluded this week. Contractors will now move to the east side of IL 23 and continue to remove sidewalks. Traffic controls will remain in place as crews begin to form the curb and sidewalks for future concrete pouring. Daytime drivers will continue to experience intermittent lane closures near construction. Once all concrete work is completed, resurfacing will begin.

East Sunset Place between South 1st Street and South 4th Street is the first street scheduled for water main replacement. The contractor concluded video surveys this week and is planning staging logistics for materials and equipment. Residents can expect traffic controls along with parking restrictions.
